This project was completed as partial fulfillment for the Instructional Media (7005) course at Nova Southeastern University, in Fort Lauderdale, Florida. This assignment employs three or more media. Also, it includes a handout. The topic of this project is "The 10 Guiding Principles of Instructional Technology and Distance Education".

This assignment was completed in two parts. The completion of Part 1 included a storyboard. The storyboard included sketches, production notes, and scripts. Using the storyboard, definitely aided in the completion of final project. An example of the storyboard is below.

Part 2 was the final project. Before the final project was submitted, a peer review was completed by at least two classmates. These were the suggestions they gave.

Peer 1
I liked your presentation, especially how you elaborated on each of the principles in a very clear way. You provided excellent content.

The principles you identified were important, particularly to the instructional design aspect of distance education. You developed the implications of each principle well.

The audio was good quality and nicely narrated in most places. Although during Principle 7 and the review there was some distracting noise, the audio level may have been a bit high during recording.

Some change in the graphics during the main presentation would help make it more engaging visually.

The presentation is over the five-minute maximum length. If you drop the review you will only be slightly over, I guess you will have to decide which is more important to you—the suggested length or including the review.

As the principles come into view during the review, some of them end up on top of each other.

Peer 2
It is very clear, visible
Check the review slide: text scrolls on top of each other. Very good narration, Good Job!

Peer 3
Great job! I enjoyed watching; however, it was a little long. I think the introduction was nice, but maybe you should shorten it and the closing, too.

After editing the presentation, it was converted to a MP4 and uploaded on my Nova website. The link is www.nova.edu/~hartry/Web_Project/Assignments_7005.html.
